

VIBURNUM

'ANVI'

MASSES OF FLOWERS

Viburnums are versatile evergreen shrubs which can be used as specimens, hedges or screening plants throughout the garden. They have been grown extensively in Australian gardens for decades. Viburnum 'Anvi' produces extra large flowers (12cm across), which completely cover the bush in winter through to late spring. The flowers are followed by deep, purplish-blue berries and both are ideal for use in floral arrangements. The stems of the new growth of 'Anvi' also flush a crimson colour, adding contrast to the forest green foliage. Viburnum 'Anvi' will grow to an evergreen, dense, round, compact shrub of dark green, shiny foliage.

FULL SUN

PART SHADE

FROST TOLERANT

HEIGHT 4M

SPREAD 3.5M

FEATURES

- Extra large flower spikes (12cm across)
- Flowers completely cover the bush in winter through to late spring
- Deep purple-blue berries follow the flowering period
- Frost hardy
- Versatile and evergreen, with a dense growth habit

USES

- Feature shrub in garden beds
- Hedging and screening
- Flowers and berries suitable for floral arrangements
- Solution for low maintenance areas

CARE

Low-medium. Grow in a moisture retentive soil for optimum results. Prune to required shape or size after berries are finished.

ORIGIN: The Netherlands // **SPECIES:** *Viburnum tinus hybrid* // **PROTECTION STATUS:** PBR protected
